On page 10 of the specification filled on 12/02/2003, change "Fig. 27 shows a flowchart for a link set up process in accordance with an embodiment of the invention" to -- Fig. 27a shows a flowchart for a first part of a link set up process in accordance with an embodiment of the invention.
Fig. 27b shows a flowchart for a second part of a link set up process in accordance with an embodiment of the invention.—

On page 37, paragraph [0076] of the specification filled on 12/02/2003, change "Fig. 27 shows" to --Fig. 27a and 27b show--.

For claim 1, line 5 change “multi-media” to –multimedia--. The same changes apply to identical claim language in claim 7 line 5, claim 13 line 6, claim 19 line 5, claim 20 line 5.

For claim 1, line 3 change both instances of “the data packet stream” to –the multimedia data packet stream--. The same changes apply to both instances of “the data packet stream” in claim 7 line 13-14, claim 13 lines 14-15, and claim 19 line 14 and claim 20 line 13-14

For claim 1 line 19, change “the display” to –the display device--. The same changes apply to identical claim language in claim 7 line 19, claim 13 line 20, claim 19 line 20 and claim 20 line

For claim 2, line 1 change “the data packet” to – a data packet--. The same changes apply to identical claim language in claim 8 line 1 and claim 14 line 1-2.

For claim 3, change the claim dependency from claim 2 to claim 1. ie. change “claim 3” to –claim 1—in line 1.

Reason for Allowance

2. For claim 1, 7, 13 , 19 and 20, the closest prior art Wolf et al (US 6,914,637) discloses streaming multimedia data packets over a link where the link includes a unidirectional main link

and a bidirection auxiliary link. The second closest prior art Greis et al (US 2004/0081151) discloses transmitting a first packet with corresponding headers and consequently sending packets without header fields since they do not change and can be deduced from the previously sent ones.

However, the prior art does not disclose by either anticipation or reasonable combination the following: wherein **the main link line is physically separate from the auxiliary channel line, comprising: communicating via the auxiliary channel line multi-media data packet stream attributes to the display device prior to commencement of transmission of the data packets from the source device to the display device over the main link line, wherein the data packet stream attributes include information used by the display device to at least identify the data packets of a particular stream, to recover original data from the multimedia data packet stream or to format the multimedia data packet stream back to a data packet stream native data rate; replacing the data packet header with a corresponding reduced size data packet header for each of the multimedia data packets at the source device commensurate with the data packet stream attributes already communicated via the auxiliary channel line; and for streaming the multi-media data packets having the reduced size data packet header from the source device to the display device; for sending information associated with the streaming between the source device and the display by way of the auxiliary channel line concurrent with the streaming;**"
